# WHAT IS AN API

**API stands for Application, Programming, Interface, which is a software intermediary that allows two applications to talk to each other**

**The Kitchen is part of the system  
that will prepare your order.**

**What is missing is the critical think  
to communicate your order to the  
kitchen and deliver your food  
back to your table**

**That's where the waiter or API comes in**

**The waiter is the messenger - or the API - that takes your request or and tells the kitchen - the system - what to do. Then the waiter delivers the response back to you; In This case, It is the food.**

To sum up an API allows different softwares talk with each - other sharing data requests and much more...
